## What is rPET?

PET is a strong, durable and recyclable material that is used for a variety of essential products like tamper-evident food containers, produce jars, cups and bottles. rPET stands for recycled polyethylene terephthalate, or recycled PET. As the most readily recyclable rigid plastic available in the market, PET and rPET can be recycled at higher rates than similar polystyrene products. For this reason, rPET and PET are among the best material choices for supporting the circular economy. Customers choose to purchase rPET products because they want to be part of the solution for packaging sustainability!
